
Hbl Battery Charger Uses Thyristor Switching

hbl battery charger uses thyristor switching - hbl battery charger uses thyristor switching principle for achieving the desired dc output. it basically consists of a transformer, a semi conductor bridge rectifier, a filter circuit and a **pure lead tin batteries - hbl** - no current limit is required during constant voltage charging. however, the charger should be capable of giving at least $0.1c$ 20 a (where c 20 is the capacity of battery at 20 hr rate of discharge to end 1.75v per cell).
